

Aim:- Create a 'Hello World App' using Flutter

Code:-import 'package:flutter/material.dart';

```
void main() {
```

```
  runApp(const MyApp());
```

```
}
```

```
class MyApp extends StatelessWidget {
```

```
  const MyApp({Key? key}) : super(key: key);
```

```
  @override
```

```
  Widget build(BuildContext context) {
```

```
    return MaterialApp(
```

```
      title: 'Welcome to Flutter',
```

```
      home: Scaffold(
```

```
        appBar: AppBar(
```

```
          title: const Text("Welcome to Flutter"),
```

```
        ),
```

```
        body: const Center(
```

```
          child: Text('Hello Mohit Tarachandani'),
```

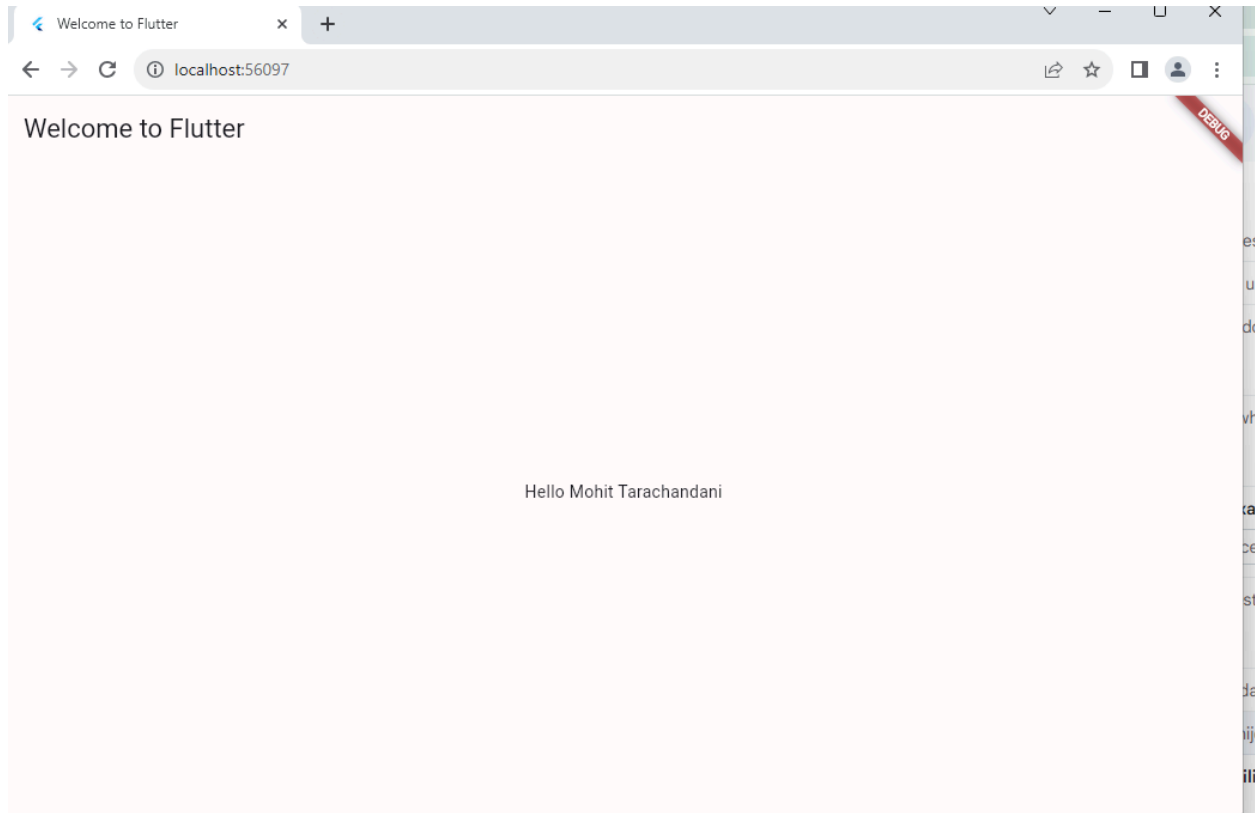

```
        ),
```

```
      ),
```

```
    );
```

```
  }
```

```
}
```

Conclusion: This Flutter code is a simple "Hello World" app that displays the text "Hello Mohit Tarachandani" in the center of the screen. It also includes an app bar with the title "Welcome to Flutter"
